

PROFILE SUMMARY

Results-driven Senior Full Stack Software Engineer with 8+ years of experience designing and building scalable, high-performance web applications across frontend and backend systems. Expertise in React.js, Next.js, TypeScript, Node.js, Redux, and modern JavaScript, with strong proficiency in responsive UI development, cloud-native technologies, and enterprise application architecture.

Experienced in building AI-powered applications using Generative AI technologies, including Retrieval-Augmented Generation (RAG), LangChain, vector search, semantic retrieval, embeddings, and LLM integrations with Gemini and OpenAI. Hands-on experience developing AI-assisted workflow automation, intelligent user experiences, and micro-frontend architectures within SAP and fintech environments.

Strong background in distributed systems, cloud-native microservices, RESTful APIs, event-driven architectures, CI/CD automation, and AWS-based production systems, with a focus on scalability, resiliency, observability, and performance optimization. Skilled in frontend-backend integration, reusable component architecture, and secure enterprise workflow development.

Hands-on experience delivering AP/AR workflows, Tax1099 and e-filing platforms, QuickBooks (QBO/QBD) integrations, subscription billing systems, payment workflows, and third-party integrations including Stripe, Plaid, Mercoa, and COLUMN. Strong understanding of data structures, algorithms, design patterns, and software engineering best practices.

Experienced in Agile/Scrum environments with a proven ability to lead full-stack initiatives, mentor engineers, solve complex technical challenges, and deliver impactful solutions in fast-paced product organizations.

WORK EXPERIENCE

- Dec 2025 - PresentZenwork Pvt Ltd, Hyderabad as Sr. Software Engineer
- Designed and developed Node.js microservices and REST APIs supporting AP/AR workflows, subscriptions, and payment processing across enterprise financial operations.
 - Worked with Next.js App Router, middleware, and API routes to build scalable and maintainable frontend architectures.
 - Developed AI-powered applications using LangChain, Gemini/OpenAI APIs, and vector search techniques.
 - Built and optimized finance and operations platforms across AP/AR workflows, including bills, recurring bills, bulk payments, approval systems, and vendor management portals.
 - Led technical initiatives across cross-functional teams, driving architecture decisions and implementation strategy.
 - Designed secure backend workflows with RBAC, audit trails, validations, retry mechanisms, and compliance-focused processing.
 - Implemented Retrieval-Augmented Generation (RAG) solutions for contextual question answering and intelligent search experiences
 - Leveraged AI-assisted development tools including Cursor, Claude, and GitHub Copilot to improve engineering productivity.
 - Implemented secure authentication and authorization using JWT, OAuth2, RBAC, SAML, SSO, and API validation mechanisms.
 - Deployed and managed cloud-native services on AWS using ECS/EKS, CloudWatch, and CI/CD pipelines for scalable production workloads.
 - Built Node.js BFF layers to provide optimized APIs for React applications, handling authentication, data aggregation, caching, and business logic orchestration.
 - Contributed to the design and operation of distributed systems handling high-volume financial transactions using Kafka, Redis, PostgreSQL, and cloud-native microservices on AWS.
 - Instrumented applications with monitoring and telemetry to improve service reliability, performance, and operational visibility.

CORE SKILLS

- Full Stack Development
- Core Web Technologies
- Microservices Architecture
- Framework Expertise
- Testing and Debugging
- State Management
- Performance Optimization
- Web Development
- Responsive Design
- Project Management
- Team Leadership & Mentorship
- Cross-functional Collaboration
- Analytical Thinking
- Problem-solving Skills
- Effective Communication & Documentation
- Ownership Mindset

TECHNICAL PROFICIENCY

- Frontend:** React.js, Next.js, TypeScript, Redux Toolkit, TanStack Query, React Query, Server Components, SSR, SSG, ISR, Micro-Frontends, Storybook, HTML5, CSS3, Tailwind CSS, Accessibility (WCAG/ARIA).
- Backend & APIs:** Node.js, NestJS, Prisma, Express.js, TypeScript, Kafka, REST APIs, Postman, Microservices Architecture, Apache Tomcat, GraphQL, OAuth2, JWT
- Databases & Search:** PostgreSQL, Redis, MySQL, MongoDB, Elasticsearch, NoSQL
- Cloud&DevOps:** AWS, Azure, Lambda, API Gateway, Docker, CI/CD, Kubernetes, GCP
- Testing:** Jest, React Testing Library, Cypress, Playwright, TDD
- Dev Tools:** Git, Github, ESLint, Prettier, Postman, Jira, Figma, VS Code, GitHub Copilot, Cursor, Claude, Windsurf, VMware.
- Monitoring & Observability:** Splunk, Datadog, Kibana, AWS CloudWatch
- SAP Technologies:** SAP SuccessFactors, SAP HANA Cloud, SAP Fiori, SAP UI5

EDUCATION

- 2013: B. Tech** DRIEMS, Odisha

- Owned features end-to-end from requirements, design, implementation, testing, deployment, monitoring, and production support.
- Optimized database performance through indexing, query tuning, pagination strategies, and connection pooling for high-volume workloads.
- Designed and optimized distributed microservices supporting thousands of concurrent requests with fault-tolerant processing, caching, and asynchronous event-driven communication.
- Developed vector embedding pipelines and semantic retrieval systems to improve contextual search accuracy and relevance in AI-powered applications.
- Developed financial operations platforms supporting payment processing, reconciliation, accounting integrations, vendor management, and compliance-focused workflows.
- Integrated Server-Sent Events (SSE) and WebSocket-based communication channels to deliver streaming updates and low-latency user experiences.
- Developed and integrated RESTful and GraphQL APIs to support scalable frontend applications and microservices communication.
- Developed database access layers using Prisma ORM with PostgreSQL, enabling type-safe queries and simplified data management.
- Improved service reliability through monitoring, alerting, observability, and automated deployment pipelines.
- Built high-performance data grids using TanStack Table with sorting, filtering, pagination, column virtualization, and server-side data fetching.

Aug 2024- Nov 2025 Zaggie Prepaid Ocean Services Ltd, Hyderabad as Sr. *Software Engineer*

- Led development of a **dynamic Form Builder** integrated with the Expense Management System (EMS), enabling customizable form creation.
- Revamped core **EMS** modules — Expense, Report, Advance, and Travel Advance — improving system performance, scalability, and user experience using **SSR React.js, Redux, Node.js and REST APIs**.
- Architected and developed the Self Booking Tool (**SBT**) UI using React.js, Redux, and responsive design principles, ensuring seamless functionality across web and mobile platforms and also UI updates using WebSockets.
- Integrated third-party APIs for **online ticket booking** and enabled **offline booking workflows** with role-based and limit-based approvals, validations, and audit trails.
- Collaborated with business stakeholders and cross-functional teams to understand requirements, propose technical solutions, and drive successful delivery of cloud-native applications.
- Built a reusable **React common component library** (NPM package) shared across multiple internal projects, enhancing development efficiency and maintaining UI consistency.
- Strong experience in collaborating closely with **backend teams (Java, Python, ROR)** to ensure smooth frontend-backend integration and system interoperability.
- Designed and developed commercial-grade REST APIs supporting payment processing, accounting automation, reconciliation workflows, and enterprise financial operations.
- Familiar with Angular framework, component-based architecture, routing, dependency injection, state management, and REST API integration.
- Led and participated in technical sessions and knowledge sharing across cross-functional teams to promote collaboration and best practices.
- Implemented continuous improvements in frontend build processes, CI/CD pipelines, and code quality standards, resulting in faster release cycles and maintainable, scalable UI architecture
- Participated in system design (HLD/LLD, sequence diagrams, component mapping) discussions for microservices integration and frontend scalability.
- Worked with Google Cloud Platform (GCP) services including Cloud Run, Cloud Storage, IAM, and monitoring tools for deploying, securing, and managing cloud-native applications and APIs.
- Designed scalable UI architectures for enterprise workflow orchestration, approval management and operational visibility.
- Led and mentored 3–5 engineers, providing code reviews, technical guidance, and task planning.
- Designed and implemented scalable microservices and event-driven architectures supporting high-volume enterprise workflows with fault-tolerant processing and distributed communication.
- Worked in monorepo environments managing shared libraries, reusable components, common utilities, and cross-application code sharing.
- Integrated Google Maps APIs to visualize location-based data using markers, custom overlays, and interactive map views.
- Built user-centric workflow applications supporting scheduling, approvals, operational monitoring, and real-time status updates across enterprise platforms.
- Developed analytical dashboards and visualizations using Recharts, including line, bar, area, and composed charts with real-time data updates.

Aug 2021 – June 2024

SAP Labs India Pvt Ltd, Hyderabad as *Software Engineer*

- Leading frontend development efforts, actively shaping organizational practices, and fostering innovation within the team.
- Continuously developing and maintaining complex React with TypeScript applications built using Micro-Frontend architecture, ensuring high scalability, performance optimization, and seamless user experience across distributed modules.
- Collaborating closely with backend developers to seamlessly integrate frontend components with Java and Python backend systems, ensuring smooth communication and interoperability.
- Implemented Redux Toolkit with secure coding practices to deliver security-focused features and seamless data collection across microservices and synchronous application workflows
- Actively participating in code building and optimization processes, leveraging expertise to enhance code quality and maintainability.
- • Designed and delivered enterprise SaaS applications within the SAP SuccessFactors ecosystem, integrating SAP HANA Cloud services and SAP Fiori design principles to improve scalability, accessibility, and user experience.
- Exploring opportunities to refine software development processes and methodologies, driving continuous improvement initiatives tailored to the specific needs and challenges of the team and projects.
- Integrated AI-powered capabilities into frontend applications, ensuring seamless user interactions, state management, and real-time data synchronization.
- Implemented WCAG-compliant UI components with ARIA best practices ensuring enterprise accessibility standards.
- Worked with SAP HANA Cloud and SAP SuccessFactors integrations, enabling secure data exchange through REST APIs and enterprise workflow automation.
- Collaborated closely with UX designers and product owners to translate wireframes, prototypes, and user journeys into accessible and responsive user experiences.
- Developed SAP Fiori-inspired responsive user interfaces using React.js and TypeScript, improving usability and consistency across enterprise workflows.

Sept 2018 - Aug 2021

Swooptalent Pvt Ltd, Hyderabad as *Software Engineer*

- Created responsive web pages using React JS, ensuring optimal display across various devices and screen sizes.
- Developed browser extensions by integrating iframe, React JS, react context, and React hooks, enhancing user experience and functionality.
- Implemented Redux to streamline API data retrieval from synchronous functions, improving data management and application performance.
- Produced clean, maintainable code while developing reusable components, adhering to best practices and coding standards.
- Conducted UX design and design reviews, refining interface layouts and enhancing user interaction for optimal usability.
- Utilized React JS to craft responsive web pages, delivering seamless browsing experiences to end-users.
- Engineered browser extensions with iframe, React context, and React hooks, elevating functionality and versatility in browser environments.
- Leveraged **Kubernetes** and **CI/CD pipelines** for continuous deployment and testing across environments.
- Developed SPA modules using Vue.js with Apollo Client for GraphQL-driven data flow.

Sep 2015 - Mar 2018

PHED, Bhubaneswar under VA Tech Wabag Ltd, Chennai as *Instrumentation Engineer*

- Coordinated with cross-functional teams to ensure operational reliability and process efficiency
- Involved in maintenance, commissioning, and coordination of instruments & control systems in a WTP with an 18 MGD capacity.
- Handled installation, erection, and calibration of control valves, sensors, PLCs, SCADA, RTUs, Analyzers, and all field equipment.

Jun 2014 - Aug 2015

IOCL, Baruni under DVWS Pvt. Ltd, Ahmedabad as *Instrumentation Engineer*

- Led maintenance activities in Reverse Osmosis (RO) and Demineralization (DM) Plants, ensuring optimal performance and reliability of instruments and control systems.
- Coordinated closely with other departments to facilitate seamless operations and resolve interdepartmental issues related to RO and DM Plants.

PROJECT DETAILS

Role	Sr. Software Engineer
Team Size	12
Roles	• Developed AP/AR payment workflows including bills, recurring bills, and bulk payments. • Built QuickBooks (QBO/QBD) integrations for accounting automation and synchronization. • Integrated Stripe, Plaid, Mercoa, and COLUMN APIs for payments and banking workflows. • Developed secure Node.js APIs with RBAC, approvals, validations, and audit trails. • Contributed to scalable, enterprise-grade financial systems using cloud-native and event-driven architectures.

Description	Designed and developed scalable fintech and payment platforms supporting AP/AR workflows, accounting integrations, vendor management, payment automation, and financial operations.
Technologies	React JS, Next.js, Redux Toolkit, TypeScript, TanStack, Node.js, Express.js, PostgreSQL, Stripe, Plaid, Mercoa, COLUMN, QuickBooks (QBO/QBD), Docker, AWS, CI/CD, Kafka, Redis, Playwright.
Role	Sr. UI Developer
Team Size	12
Roles	- Built responsive SBT UI using React.js and Redux for web and mobile. - Integrated third-party APIs for online booking; enabled offline booking workflows. - Implemented custom validations and role-based approval logic.
Description	Designed and developed a unified ticket booking platform supporting both online bookings (via third-party APIs) and offline workflows. Implemented role-based approvals, user preference handling, and policy-compliance logic. Enabled full and partial ticket cancellations, improving flexibility, automation, and overall user experience.
Technologies	React JS, Redux, Redux Saga, JavaScript, HTML, CSS, JSON, Jest, Storybook, Next JS, Node JS, Antd, MUI, AWS, Docker, CI/CD, React Router, Styled Component, Chart.js, React testing library, Cypress, and Playwright
Role	UI Developer
Team Size	10
Roles	- Developed SAP new CDP UI development, integrating OMP, Goals, and Growth Portfolio. - Leveraged GenAI for personalized recommendations, enhancing user engagement. - Revamped enterprise CRM UI with React JS and Redux and implemented TDD.
Description	This project enables career development through OMP, Goal setting, and Growth Portfolio features. Users align goals with attributes, pending manager approval. GenAI enhances user experience and career progression.
Technologies	React JS, Redux, Redux Toolkit, JavaScript, HTML, CSS, Bootstrap, JSON, Browser Extension, React testing library, Jest, Cypress, Enzyme, Cucumber, Storybook, SAP UI5, CI/CD, React Router.
Role	UI Developer
Team Size	20
Roles	- Developed SAP new integrated learning UI. - Introduced GenAI-driven Whole Self Model for personalized experiences. - Collaborated with backend team, seamlessly integrating new features into Java backend.
Description	This project provides a detailed list of attributes with ratings and offers recommendations for evaluating team members. Managers can adjust ratings based on performance to align with organizational goals.
Technologies	React JS, Redux, Redux Toolkit, JavaScript, HTML, CSS, JSON, SAP UI5, Storybook, Cucumber, Jest, Cypress, React Testing Library, Webpack, Babel
Role	UI Developer
Team Size	20
Roles	- Developed SAP new integrated learning UI. - Implemented Whole Self Model feature which has AI/ ML driven functionality. - Implemented CI/CD pipelines with Jenkins and Docker, streamlining deployment.
Description	This project includes attributes, skills, competencies, behaviors, tags, and proficiency ratings for administrators with status alteration authority. Administrators can also manage translations as required.
Technologies	React JS, Redux, Redux Toolkit, JavaScript, HTML, CSS, JSON, SAP UI5, Storybook, Cucumber, Jest, Cypress, React Testing Library, Webpack
Client	Workday/ Paradox/ Taleo/ clearCompany
Role	UI Developer
Team Size	4
Roles	- Developed automated talent matching UI and data synchronization platform with React JS and JavaScript. - Integrated multiple ATS systems and developing browser extensions for data display. - Used browser extension for data synchronization and created Business Browser Extension.
Description	Admin-initiated self-model UI generates code and UI automatically. Integrates with browser extension to fetch and crawl candidate data. it seamlessly integrates with a browser extension, enabling the fetching and crawling of candidate data from various sources.

Technologies React JS, Redux, Redux Saga, JavaScript, HTML, CSS, Bootstrap, JSON, Chrome Browser Extension, React testing library, Jest, Enzyme, Webpack, Kubernetes, Apollo Client.
